"Mean" is the arithmetic average.

"Median" is the middle value of a set. When there are an even number of elements in the set, the median is the arithmetic mean of the two middle values.

"Mode" is the value that occurs with the greatest frequency in a set. There may be multiple modes in a set.

Note: Only one fit per pair per deal is counted. For example, if on one deal N-S have two 9-card fits (or one 9-card fit and one 8-card fit), that will be counted only as one 9-card fit.
